

Final Review WS 2

Get into $y = mx + b$ form and write the slope and y int.

① $3x - 2y = -6$

② $-4x - y = 3$

③ $2y = -4x + 6$

Find the slope of the line b/w the two points.

④ $(8, 1), (12, 3)$

⑤ $(-1, -1), (-8, 8)$

⑥ $(3, 2), (2, 3)$

Solve by graphing

⑦ $y \leq x + 7$
 $y > \frac{5}{4}x - 6$
