

2/6/13 Quadratic Formula problems

Use the quadratic formula to solve.

$$\textcircled{1} \quad x^2 - 5x + 6 = 0$$

$$a = \quad b = \quad c =$$

calculate $b^2 - 4ac$

$$\frac{-b \rightarrow \boxed{} \pm \sqrt{b^2 - 4ac} \rightarrow \boxed{}}{2(\boxed{}) \rightarrow a \rightarrow \boxed{}}$$

$$\frac{\boxed{} \pm \boxed{}}{\boxed{}} \rightarrow \frac{\boxed{} + \boxed{}, \boxed{} - \boxed{}}{\boxed{}, \boxed{}}$$

Answer
 $\rightarrow \boxed{} , \boxed{}$

$$\textcircled{2} \quad x^2 + 6x + 8 = 0$$

$$a = \quad b = \quad c =$$

calculate $b^2 - 4ac$

$$\frac{-b \rightarrow \boxed{} \pm \sqrt{b^2 - 4ac} \rightarrow \boxed{}}{2(\boxed{}) \rightarrow a \rightarrow \boxed{}}$$

$$\frac{\boxed{} \pm \boxed{}}{\boxed{}} \rightarrow \frac{\boxed{} + \boxed{}, \boxed{} - \boxed{}}{\boxed{}, \boxed{}}$$

Answer
 $\rightarrow \boxed{} , \boxed{}$

$$③ \quad x^2 + 11x + 10 = 0$$

$$a = \boxed{} \quad b = \boxed{} \quad c = \boxed{}$$

calculate $b^2 - 4ac$

$$\frac{-b \rightarrow \boxed{} \pm \sqrt{\boxed{}}}{2(\boxed{})} \quad a \nearrow \boxed{}$$

\downarrow

$$\frac{\boxed{} \pm \boxed{}}{\boxed{}} \rightarrow \frac{\boxed{} + \boxed{}}{\boxed{}}, \frac{\boxed{} - \boxed{}}{\boxed{}}$$

Answer $\rightarrow \boxed{}$

$$④ \quad 5x^2 + 19x + 12 = 0$$

$$\text{Note: } 19^2 = 361$$

$$a = \boxed{} \quad b = \boxed{} \quad c = \boxed{}$$

calculate $b^2 - 4ac$

$$\frac{-b \rightarrow \boxed{} \pm \sqrt{\boxed{}}}{2(\boxed{})} \quad a \nearrow \boxed{}$$

\downarrow

$$\frac{\boxed{} \pm \boxed{}}{\boxed{}} \rightarrow \frac{\boxed{} + \boxed{}}{\boxed{}}, \frac{\boxed{} - \boxed{}}{\boxed{}}$$

Answer $\rightarrow \boxed{}$
