

The Quadratic Formula

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

Solve using the quadratic formula

$$\textcircled{1} \quad 2x^2 - 7x - 3 = 0$$

$$\textcircled{2} \quad x^2 + 3x - 7 = 0$$

$$\textcircled{3} \quad 9x^2 - 7x + 4 = 0$$

$$\textcircled{4} \quad 9x^2 + 4x - 2 = 0$$

$$\textcircled{5} \quad x^2 + 5x - 4 = 0$$

$$\textcircled{6} \quad 2x^2 + 3x - 4 = 0$$
